Table of Contents

Esri resources for your organization

Course introduction

- Course introduction
- Course goals
- Installing the course data
- Icons used in this workbook
- Understanding the ArcGIS platform

1 Why use a geodatabase?

- Lesson introduction
- Types of data
- Data within your organization
- Organizational goals
- Advantages of using a geodatabase
- Organizing your data for a feature dataset
- Life cycle of a geodatabase
- Exploring a geodatabase
- Exercise 1: Get started with a geodatabase
 - Sign in to ArcGIS Pro
 - Create a new ArcGIS Pro project
 - Inventory the data
 - Create a file geodatabase
 - Import a feature class into the geodatabase
 - Create a feature dataset
 - Import feature classes to the feature dataset
 - Add metadata to the imported layers
- Lesson review

2 Improving data integrity with geodatabase structure

- Lesson introduction
- What is a schema?
- Using a geodatabase to improve data integrity
- Subtypes and domains in your organization
- Exercise 2: Work with subtypes and domains
 - Sign in to ArcGIS Pro
 - Create a new ArcGIS Pro project
 - Examine the domains
 - Apply domains to the fields

- Create a domain
- Apply the new domain
- Add a study area layer
- Edit with domains
- Create subtypes
- Use subtypes with domains
- Symbolize with subtypes
- Edit with subtypes
- Challenge: Controlling input with range domains

Using a data model to improve workflows

Refining a data model

Selecting a data model

Working with data models

Lesson review

Answers to Lesson 2 questions

Exercise 2 challenge solution

3 Associate nongeographic data with geographic data

Lesson introduction

Why associate nongeographic data with geographic data?

Types of nonspatial data

Considerations with incorporating nonspatial data

Basics of cardinality

Spatial and nongeographic data connections

Checkpoint

Relationship classes and tabular data

Methods to define associations

Relationship class workflow

Exercise 3: Use relationship classes

- Start the project

- Examine the Parcels feature class

- Examine the ParcelOwners table

- Create a relationship class

- Configure pop-ups

Adding media files with attachments

Using the Collector app with your geodatabase

Lesson review

Answers to Lesson 3 questions

4 Managing raster data

Lesson introduction

What is raster data?

- Raster data in your organization
- Raster data management issues
- Storing rasters in a geodatabase
- What is a mosaic dataset?
- Creating a mosaic dataset
- Advantages of mosaic datasets
- Mosaic dataset workflow
- Exercise 4: Create a mosaic dataset
 - Start the project
 - Add rasters to the map
 - Review raster properties
 - Remove rasters from the map
 - Create a mosaic dataset
 - Add rasters to the mosaic dataset
 - Examine the attribute table
 - Evaluate rasters within the mosaic dataset
 - Modify the mosaic dataset properties
- Lesson review
- Answers to Lesson 4 questions

5 Designing geodatabase topologies

- Lesson introduction
- What is geodatabase topology?
- Why use a topology?
- Using topology in your organization
- How topology works
- Types of rules
- Topology rules for each workflow
- Using topology to correct geometry
- Topology design workflow
- Exercise 5A: Build a topology
 - Start the project
 - Evaluate spatial relationships
 - Create a topology
 - Configure the topology
 - Validate the topology
- Topology edit workflow
- Exercise 5B: Apply a topology
 - Assess topology errors
 - Add study area
 - Prepare to fix errors
 - Fix errors

Lesson review

Answers to Lesson 5 questions

6 Migrating to an enterprise geodatabase

Lesson introduction

What is an enterprise geodatabase?

Comparison of types

Compare different geodatabase types

Benefits of an enterprise geodatabase

Checkpoint

Creating an enterprise geodatabase

Enterprise geodatabase connections

Building a connection

Accessing an enterprise geodatabase

Methods to add data to an enterprise geodatabase

Which method is more appropriate?

Exercise 6: Connect to an enterprise geodatabase

- Start the project

- Evaluate database connections

- Load data into an enterprise geodatabase

Lesson review

Answers to Lesson 6 questions

7 Working with enterprise geodatabases

Lesson introduction

Types of users within an enterprise geodatabase

Match the type of user

Controlling user capabilities

Role management

Checkpoint

Controlling user roles

Exercise 7A: Manage privileges in an enterprise geodatabase

- Start the project and make connections

- Grant privileges to the storm_water role

- Grant privileges to the waste_water role

Workflows for updating an enterprise geodatabase

Updating through automation

Exercise 7B: Update an enterprise geodatabase

- Add wastewater data to the map

- Evaluate data schemas

- Prepare the existing data

- Update the feature with new data

Lesson review
Answers to Lesson 7 questions

8 Editing workflows in a geodatabase

Lesson introduction
Types of editing workflows
Considerations about choosing an editing workflow
When should you version your feature class?
Checkpoint
Versioned editing
Learning the basics of versioned editing
Exercise 8: Edit versioned data
 Start the project
 Add a streets layer to the map
 Version the streets layer
 Edit the streets layer
 Compare versions
 Reconcile and post edits
 Confirm the changes
Connecting to ArcGIS Enterprise
Benefits of sharing with ArcGIS Enterprise
Workflow for using a feature service for editing
Appropriate workflows for each connection
Editing a shared feature service
Lesson review
Answers to Lesson 8 questions

Appendices

Appendix A: Esri data license agreement
Appendix B: Answers to lesson review questions
Appendix C: Additional resources
