# Table of Contents

Esri resources for your organization

## Course introduction

- Course introduction
- Course goals
- Installing the course data
- Icons used in this workbook
- Understanding the ArcGIS platform

## 1 Python automation for your organization

- Lesson introduction
- Benefits of Python automation
- The Python script creation workflow
- Integrating Python in ArcGIS Pro
- Ways to access Python in ArcGIS Pro
- Determine a method for accessing Python
- [Optional] Adding Python modules to ArcGIS Pro
- Lesson review
- Answers to Lesson 1 questions

## 2 Using geoprocessing tools in Python

- Lesson introduction
- Viewing parameters in a geoprocessing tool
- Explore the syntax of a geoprocessing tool
- Ways to use variables in a script
- Using variables in a script
- Exercise 2A: Create a simple script with variables
  - Sign in to ArcGIS Pro
  - Create a new ArcGIS Pro project
  - Add in data for the affected area
  - Evaluate the syntax of the Copy Features tool
  - Evaluate the syntax of the Kernel Density tool
  - Combine the geoprocessing tools in a script
- Python troubleshooting techniques
- Troubleshooting errors in a script
- Exercise 2B: Add troubleshooting techniques to a Python script
  - Add pseudocode
  - Add print statements
  - Comment existing code

Run the script in PyCharm

Lesson review

Answers to Lesson 2 questions

### 3 Using Describe object properties in geoprocessing tools

Lesson introduction

Accessing properties with a Describe object

Identify available Describe function properties

Describe syntax and usage

Accessing Describe object properties

Exercise 3: Use the Describe object in a geoprocessing script

- Sign in to ArcGIS Pro

- Create a new map

- Examine the properties of a feature class

- Use the Describe function to examine properties

- Create a new Python script in PyCharm

- Create a Describe object

- Use Describe properties to create a new feature class

- Verify the new feature class

[Optional] Using the da.Describe object in a geoprocessing script

Lesson review

Answers to Lesson 3 questions

### 4 Automating Python scripts with lists

Lesson introduction

List functions in Python

Finishing the List function syntax

Exercise 4A: Prepare to automate with Python lists

- Sign in to ArcGIS Pro

- Create a new map

- Create a list of workspaces

- Create a list of features

- Create a list of fields

Using a for loop for automation

Using a for loop to iterate over lists

Exercise 4B: Automate a geoprocessing workflow using loops

- Create a new Python script in PyCharm

- Copy feature classes from a workspace

- Verify the new feature classes

Lesson review

Answers to Lesson 4 questions

## 5 Working with cursors

Lesson introduction

Types of cursors

Determine which cursor to use

Exploring cursor syntax

Using cursors in a workflow

Applying the cursor workflow

Exercise 5: Read and update values in a feature class

- Create a new Python script in PyCharm

- Set up the Python script

- Create an Update cursor

- Create a Search cursor

- Write values to a CSV file

- Run the script in PyCharm

- Sign in to ArcGIS Pro

- Create a new map

- Verify the script results

Lesson review

Answers to Lesson 5 questions

## 6 Geoprocessing with geometry objects

Lesson introduction

Benefits of geometry objects

Workflows to create geometry objects

Discovering polyline geometry objects

Components of a geometry object

Discover geometry object methods

Exercise 6: Convert coordinates into affected area polygons

- Open a Python script in PyCharm

- Evaluate the Python script

- Create the geometry object from a list

- Run the script in PyCharm

- Sign in to ArcGIS Pro

- Create a new map

- Verify the script output feature classes

Lesson review

Answers to Lesson 6 questions

## 7 Error management techniques

Lesson introduction

Types of errors that occur in geoprocessing

Using try-except statements

Error handling techniques

Introducing error handling in Python scripts

Determine the error handling technique

Exercise 7: Apply error handling techniques

- Open the script in PyCharm

- Run the Python script with empty input

- Add a custom Raise exception

- Run a Python script with a Raise exception

- Run a Python script with invalid input

- Add an arcpy.ExecuteError exception

- Run the Python script with all error handling

Lesson review

Answers to Lesson 7 questions

## 8 Creating a Python script tool

Lesson introduction

Improving script accessibility

Components of a Python script tool

Accepting user input

Parameter identification

Exercise 8: Create a Python script tool

- Prepare the Python script for user input

- Create a new map

- Create a script tool in ArcGIS Pro

- Run the Python script tool

Lesson review

Answers to Lesson 8 questions

## 9 Adding validation to script tools

Lesson introduction

Customizing script tool behavior

Using validation to create customizations

Validating script tool inputs using ToolValidator methods

Exercise 9: Add custom messaging to a script tool

- Update the PyCharm autosave settings

- Start ArcGIS Pro
- Open the script tool validation properties
- Add code to the validator script
- Verify the validator code
- Verify the updated tool messaging

Lesson review

Answers to Lesson 9 questions

## 10 Using Python script tools in the platform

- Lesson introduction
- Methods to share a Python script tool
- Determine the appropriate method
- Workflow to share a Python script tool
- Exercise 10: Share a geoprocessing package
  - Start ArcGIS Pro
  - Analyze the geoprocessing package
  - Modify the metadata
  - Share the geoprocessing package
- Workflow review
- Sharing a web tool within the ArcGIS platform
- Answers to Lesson 10 questions

## Appendices

- Appendix A: Esri data license agreement
- Appendix B: Answers to lesson review questions
- Appendix C: Additional resources
